

Meet Doctor Smart!

One day, Doctor Smart has an idea.

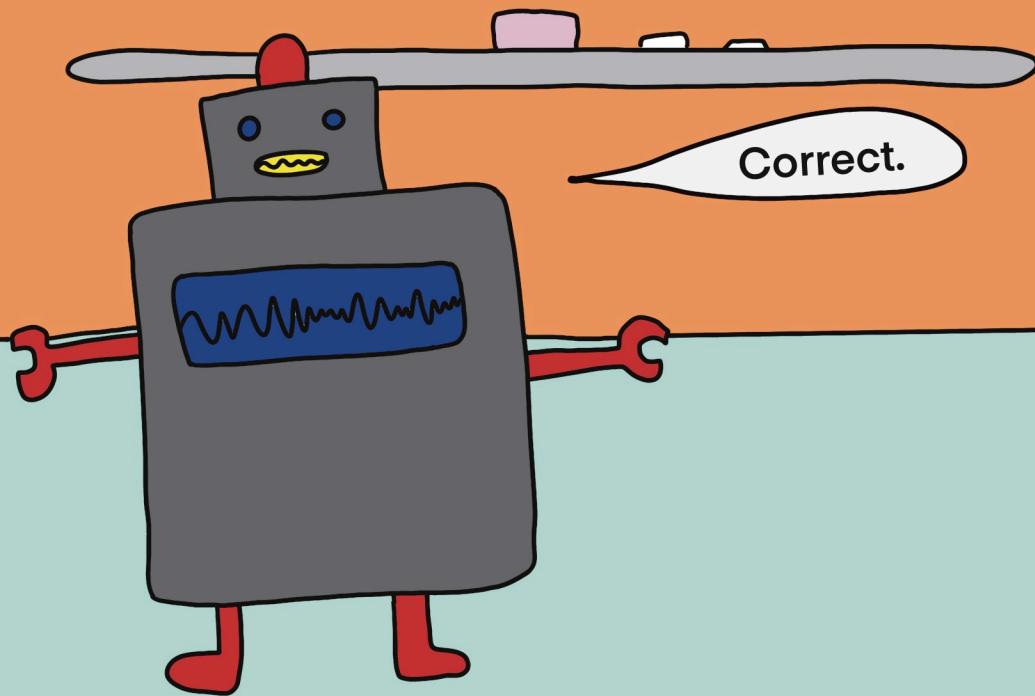

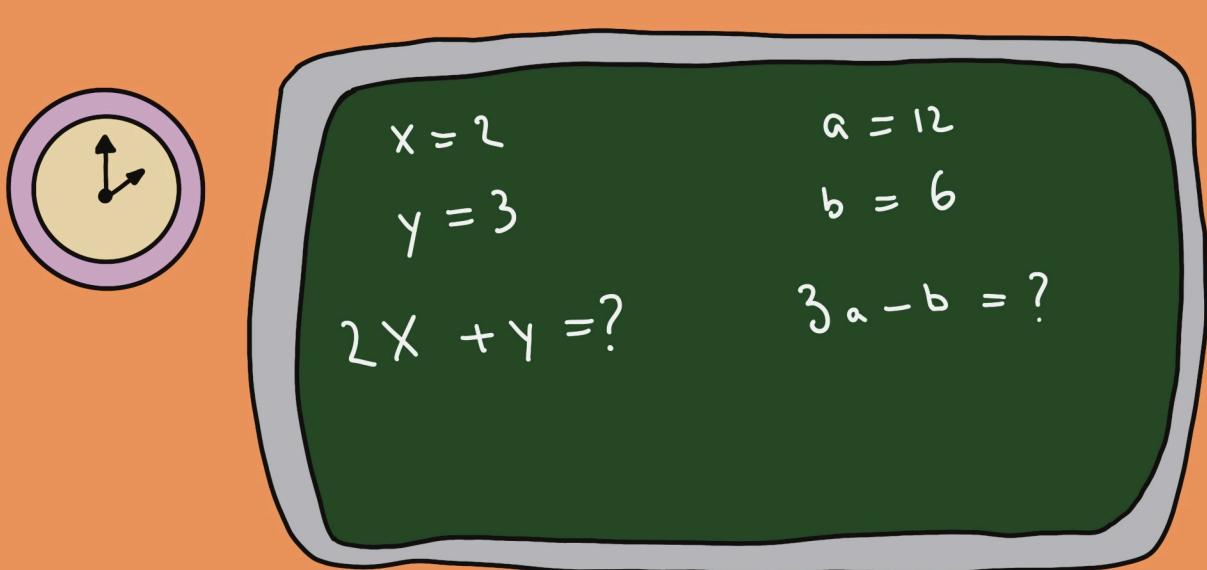

She immediately starts building her machine...

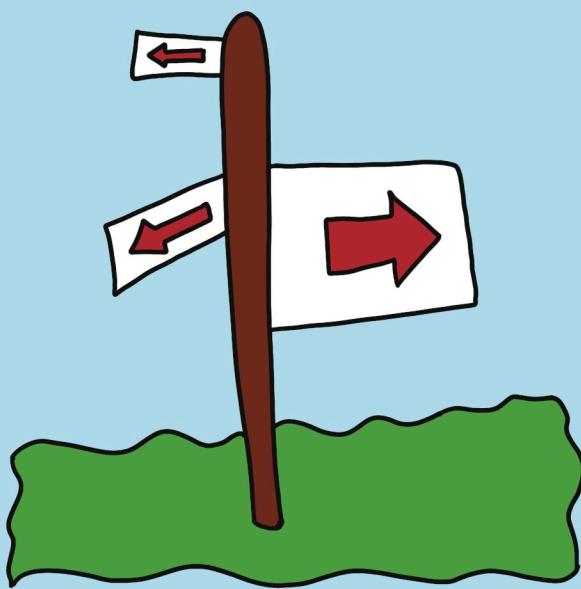

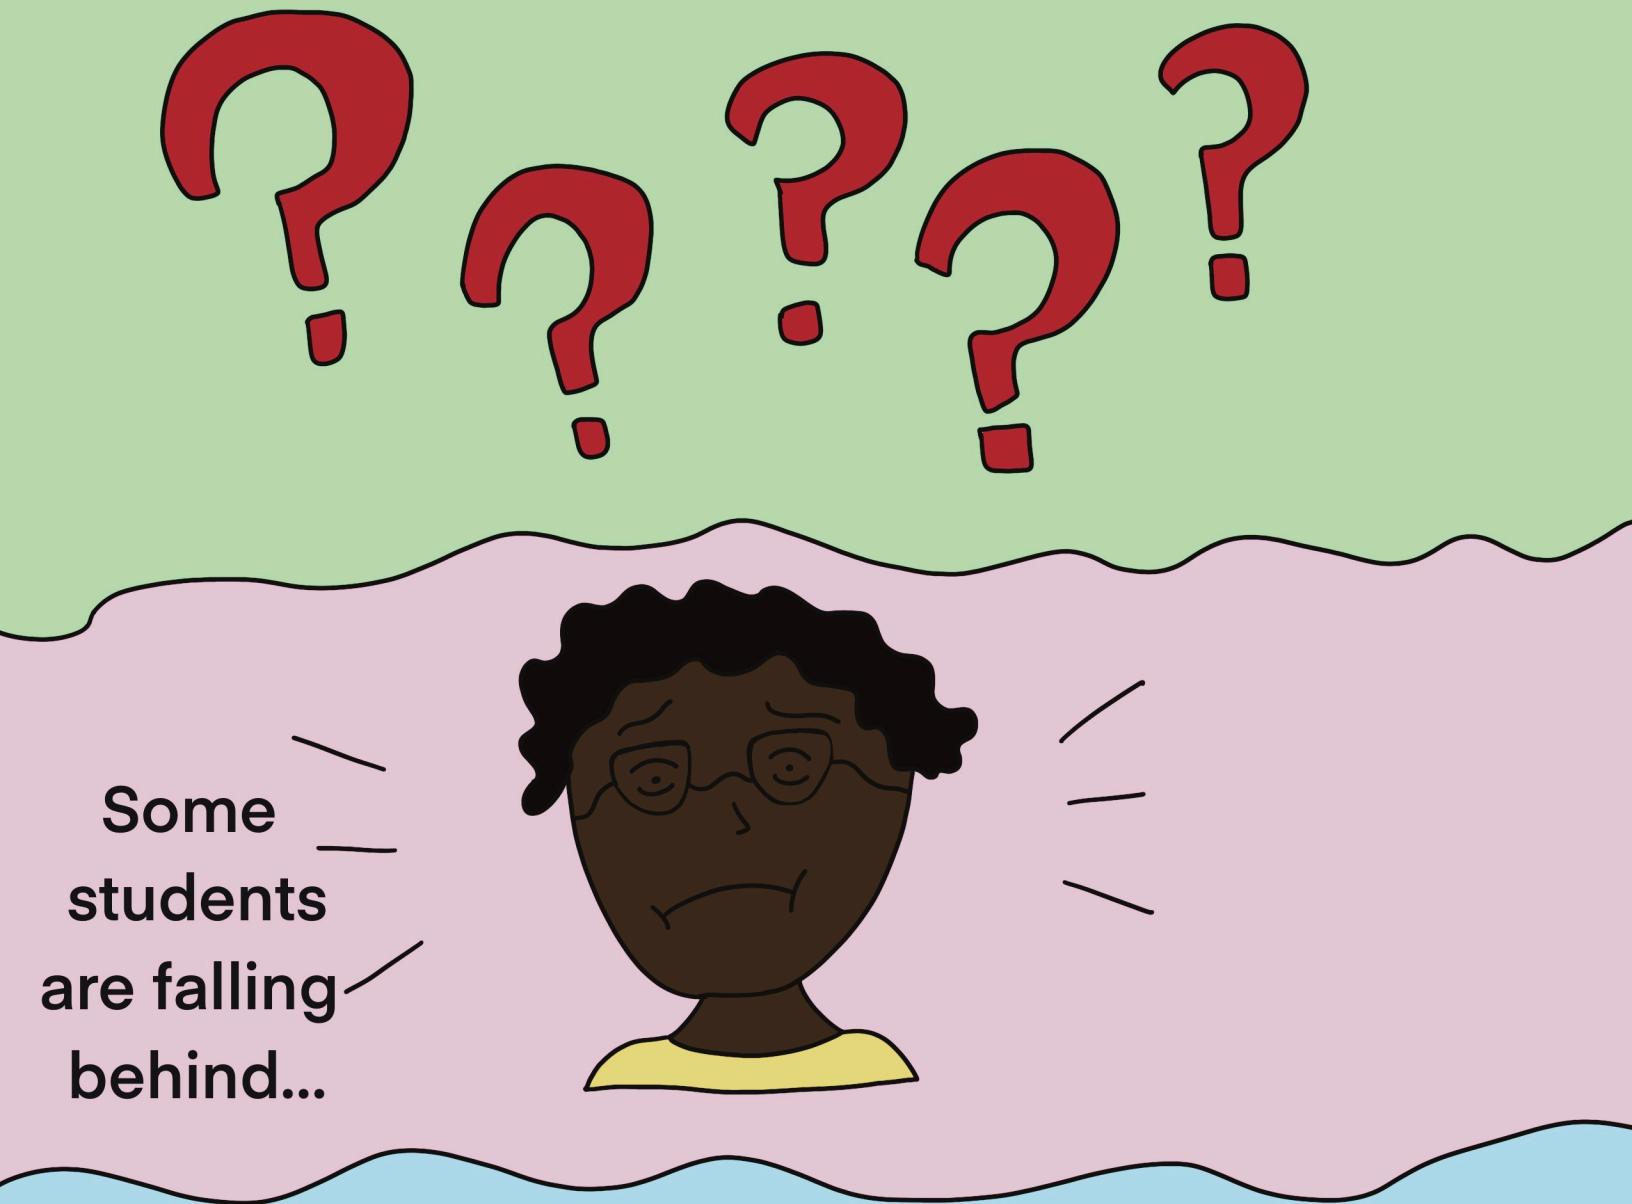

And successfully finishes the Learn-learn 1000.

At first everything seems nice...

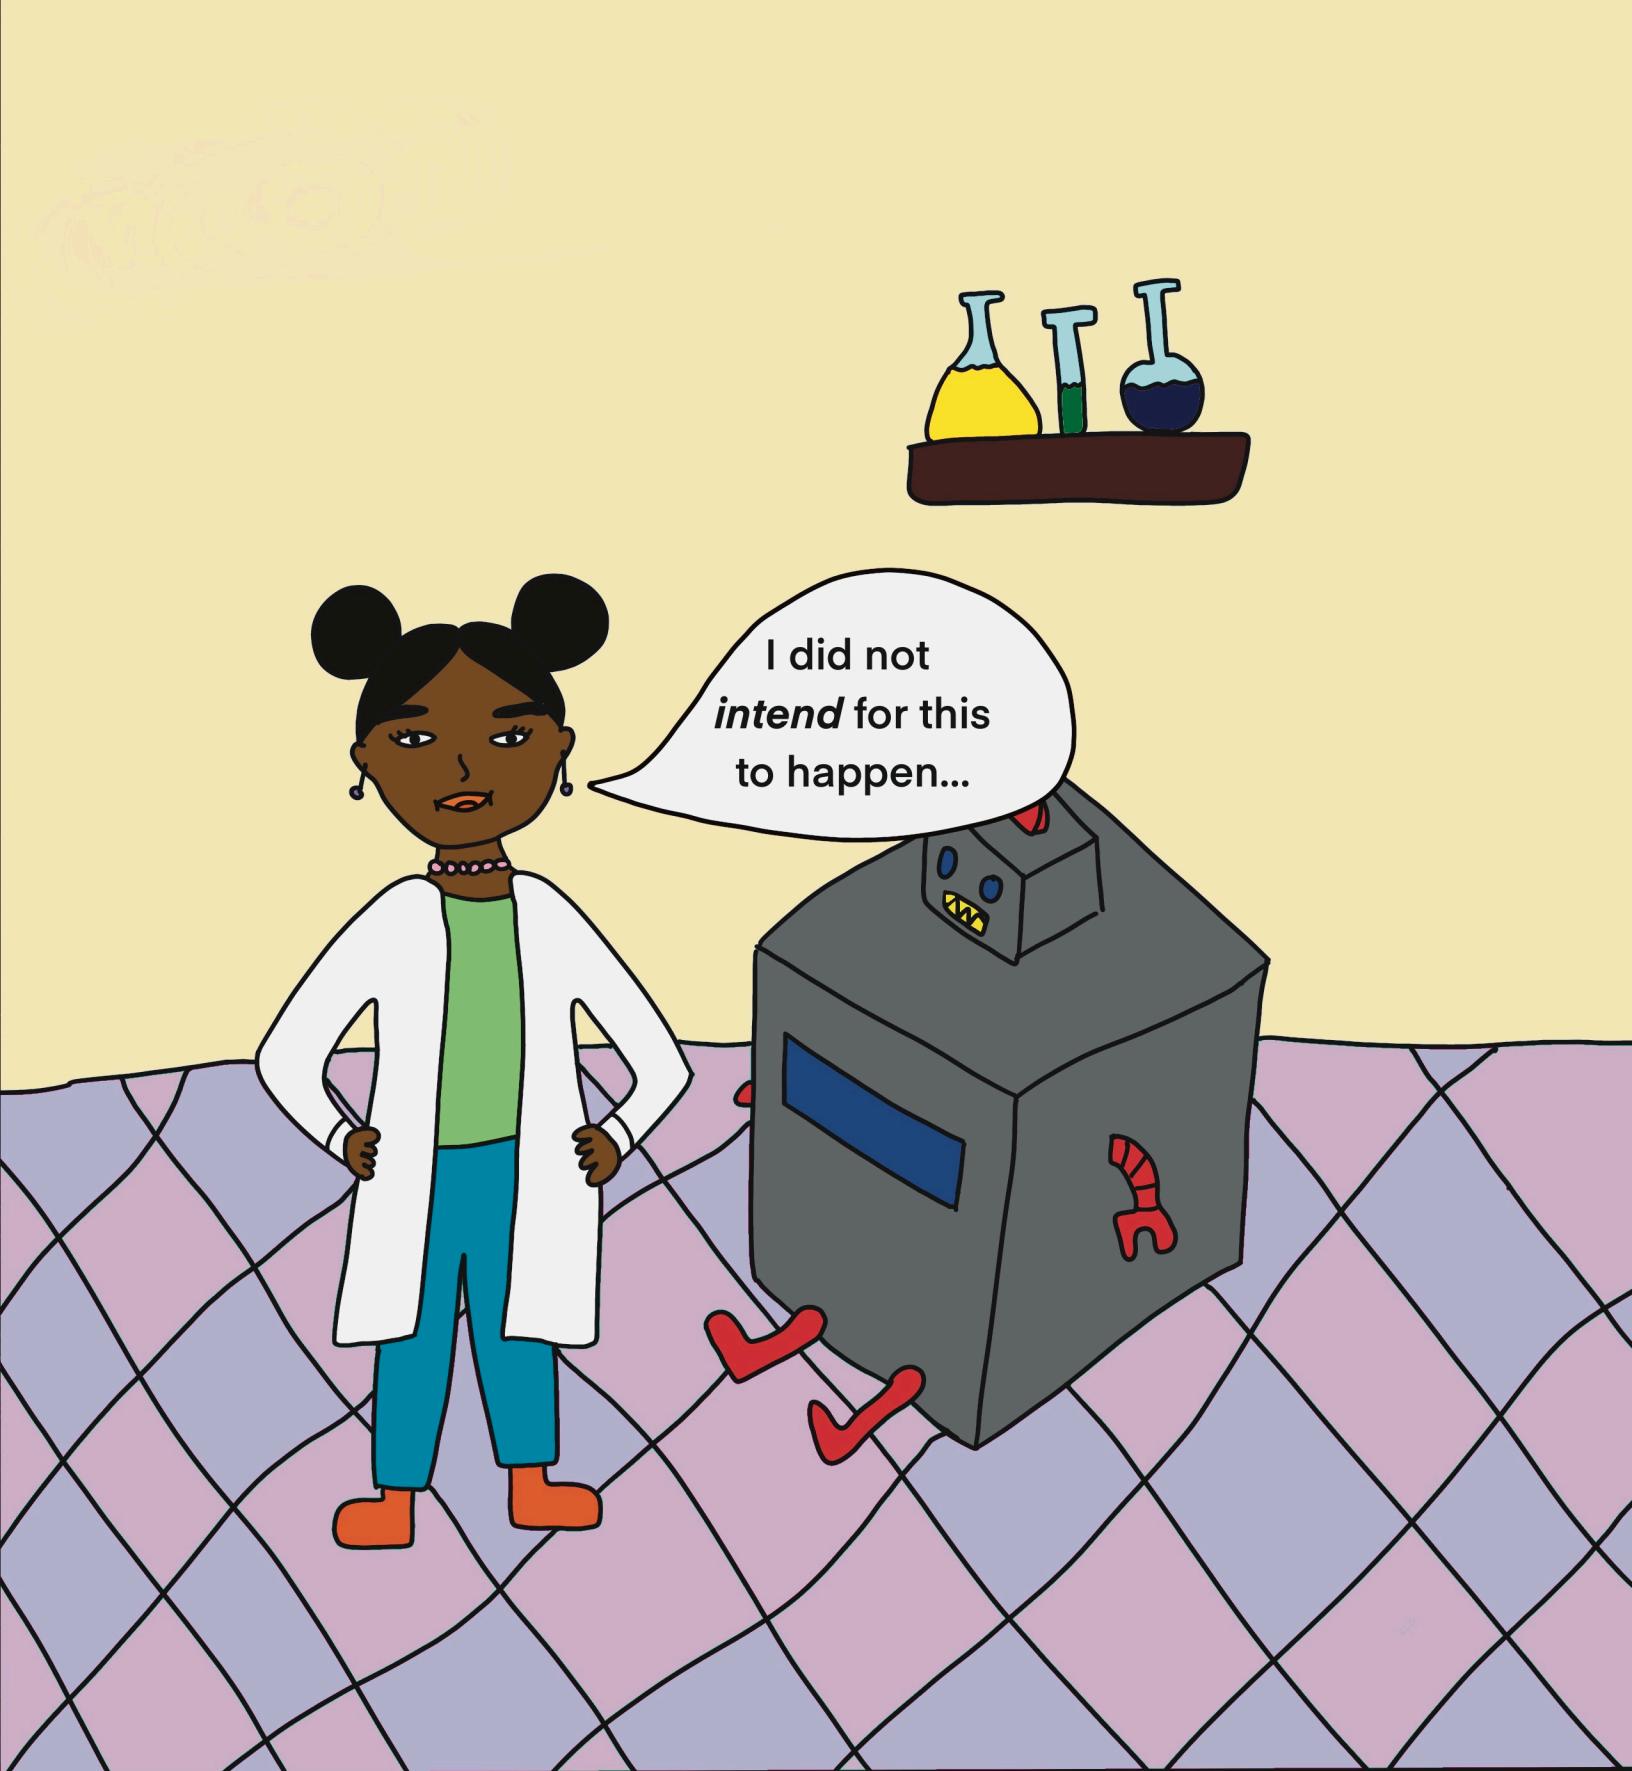

Then, some problems arise.

**because not
everyone learns
the same way!**

**Doctor Smart sees that students have started to
lose their passion for learning and is concerned!**

She realises her mistake.

...but I should have thought more!

I should have asked myself...

1- Could this idea or thing hurt someone's feelings, body, or freedom?

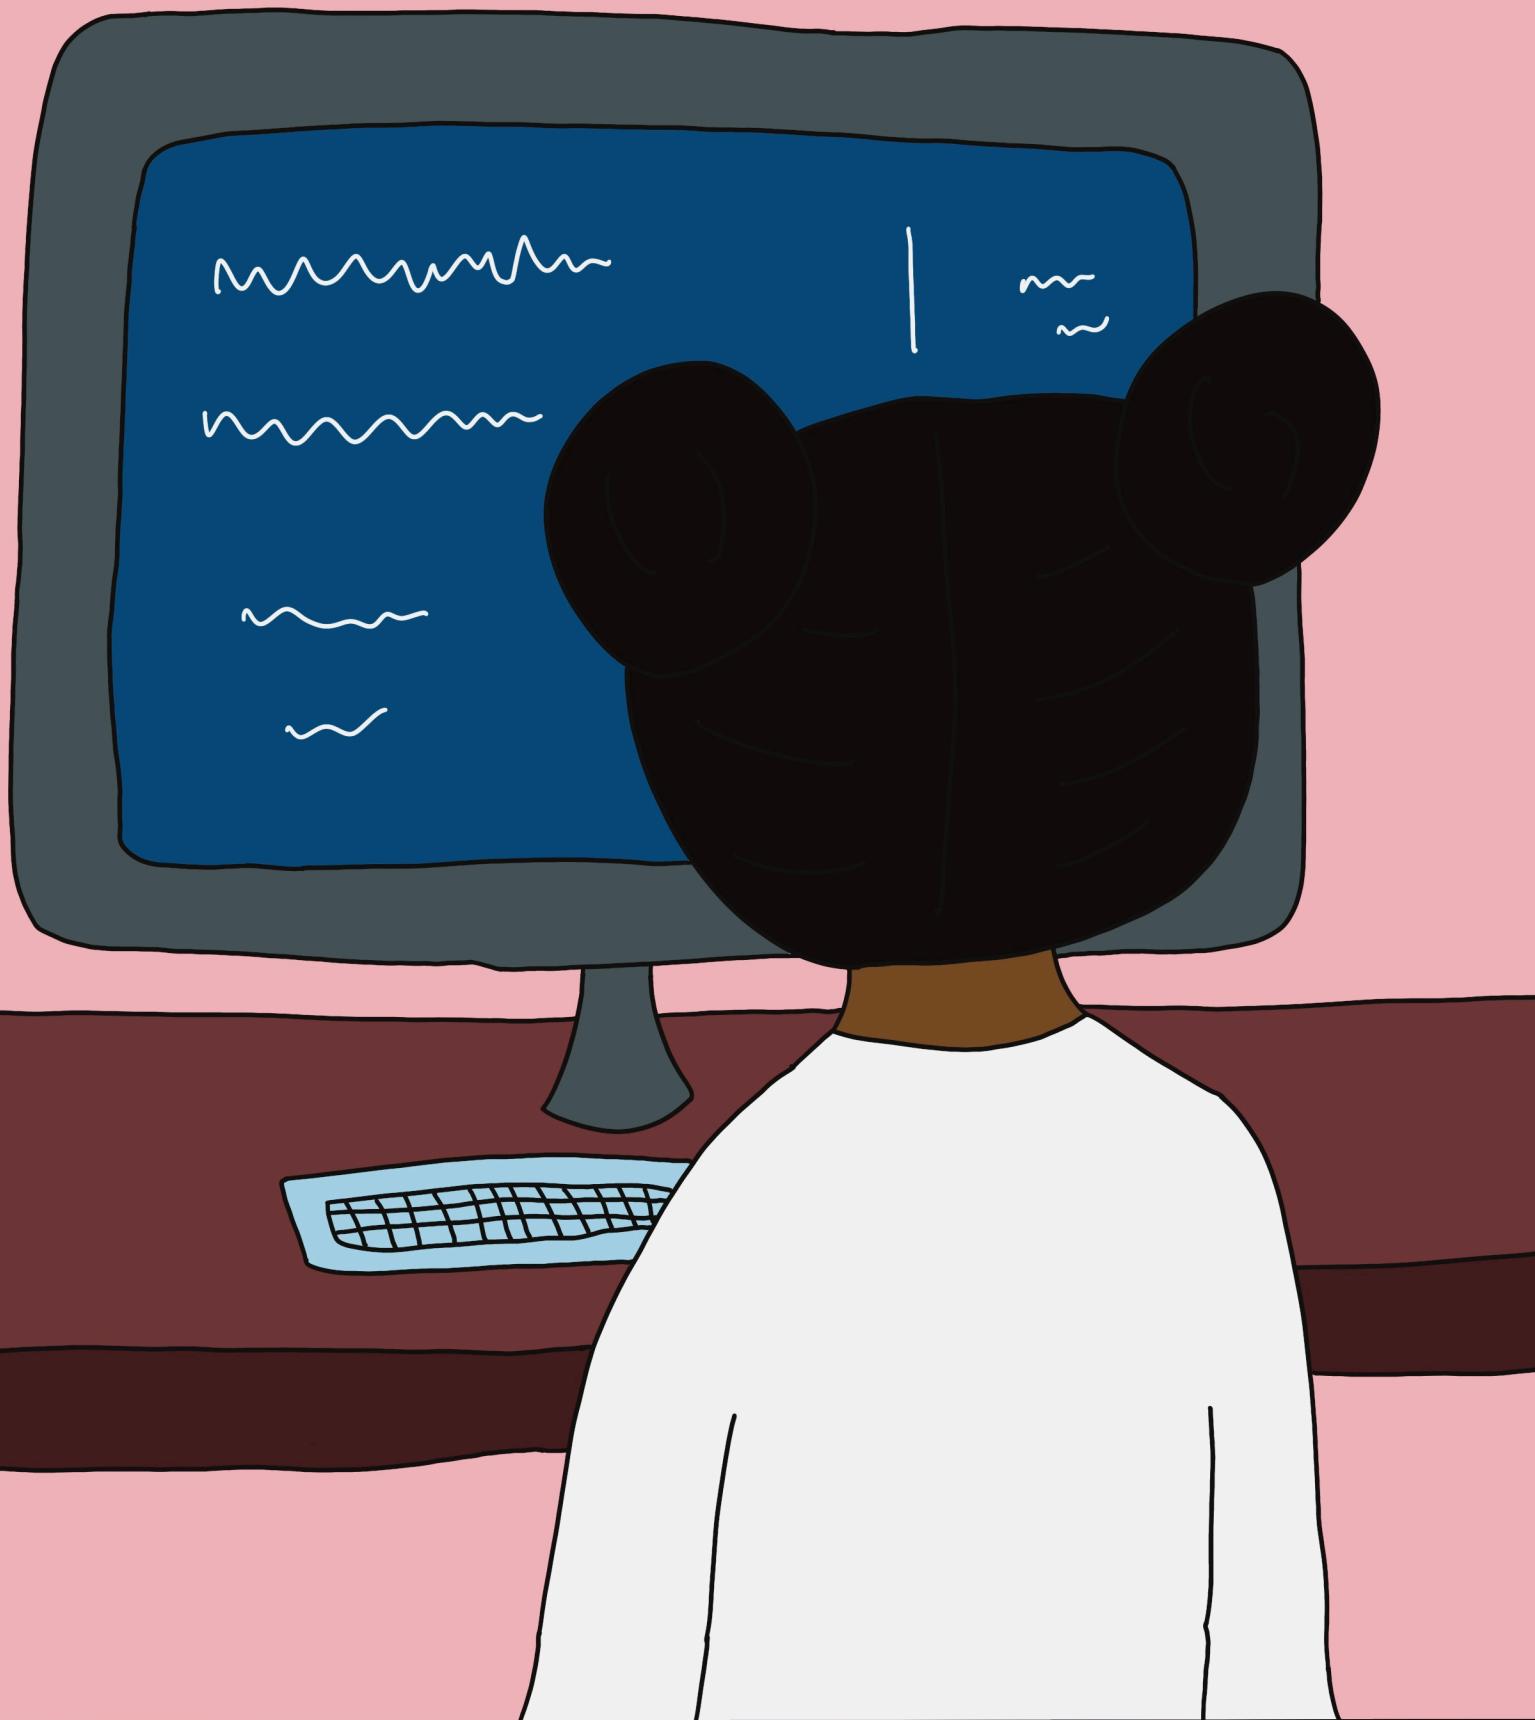

2- Who could help me see problems I might not notice?

3- Is just TRYING to be good enough?

4- Are there people or friends who might not get help from this idea or thing?

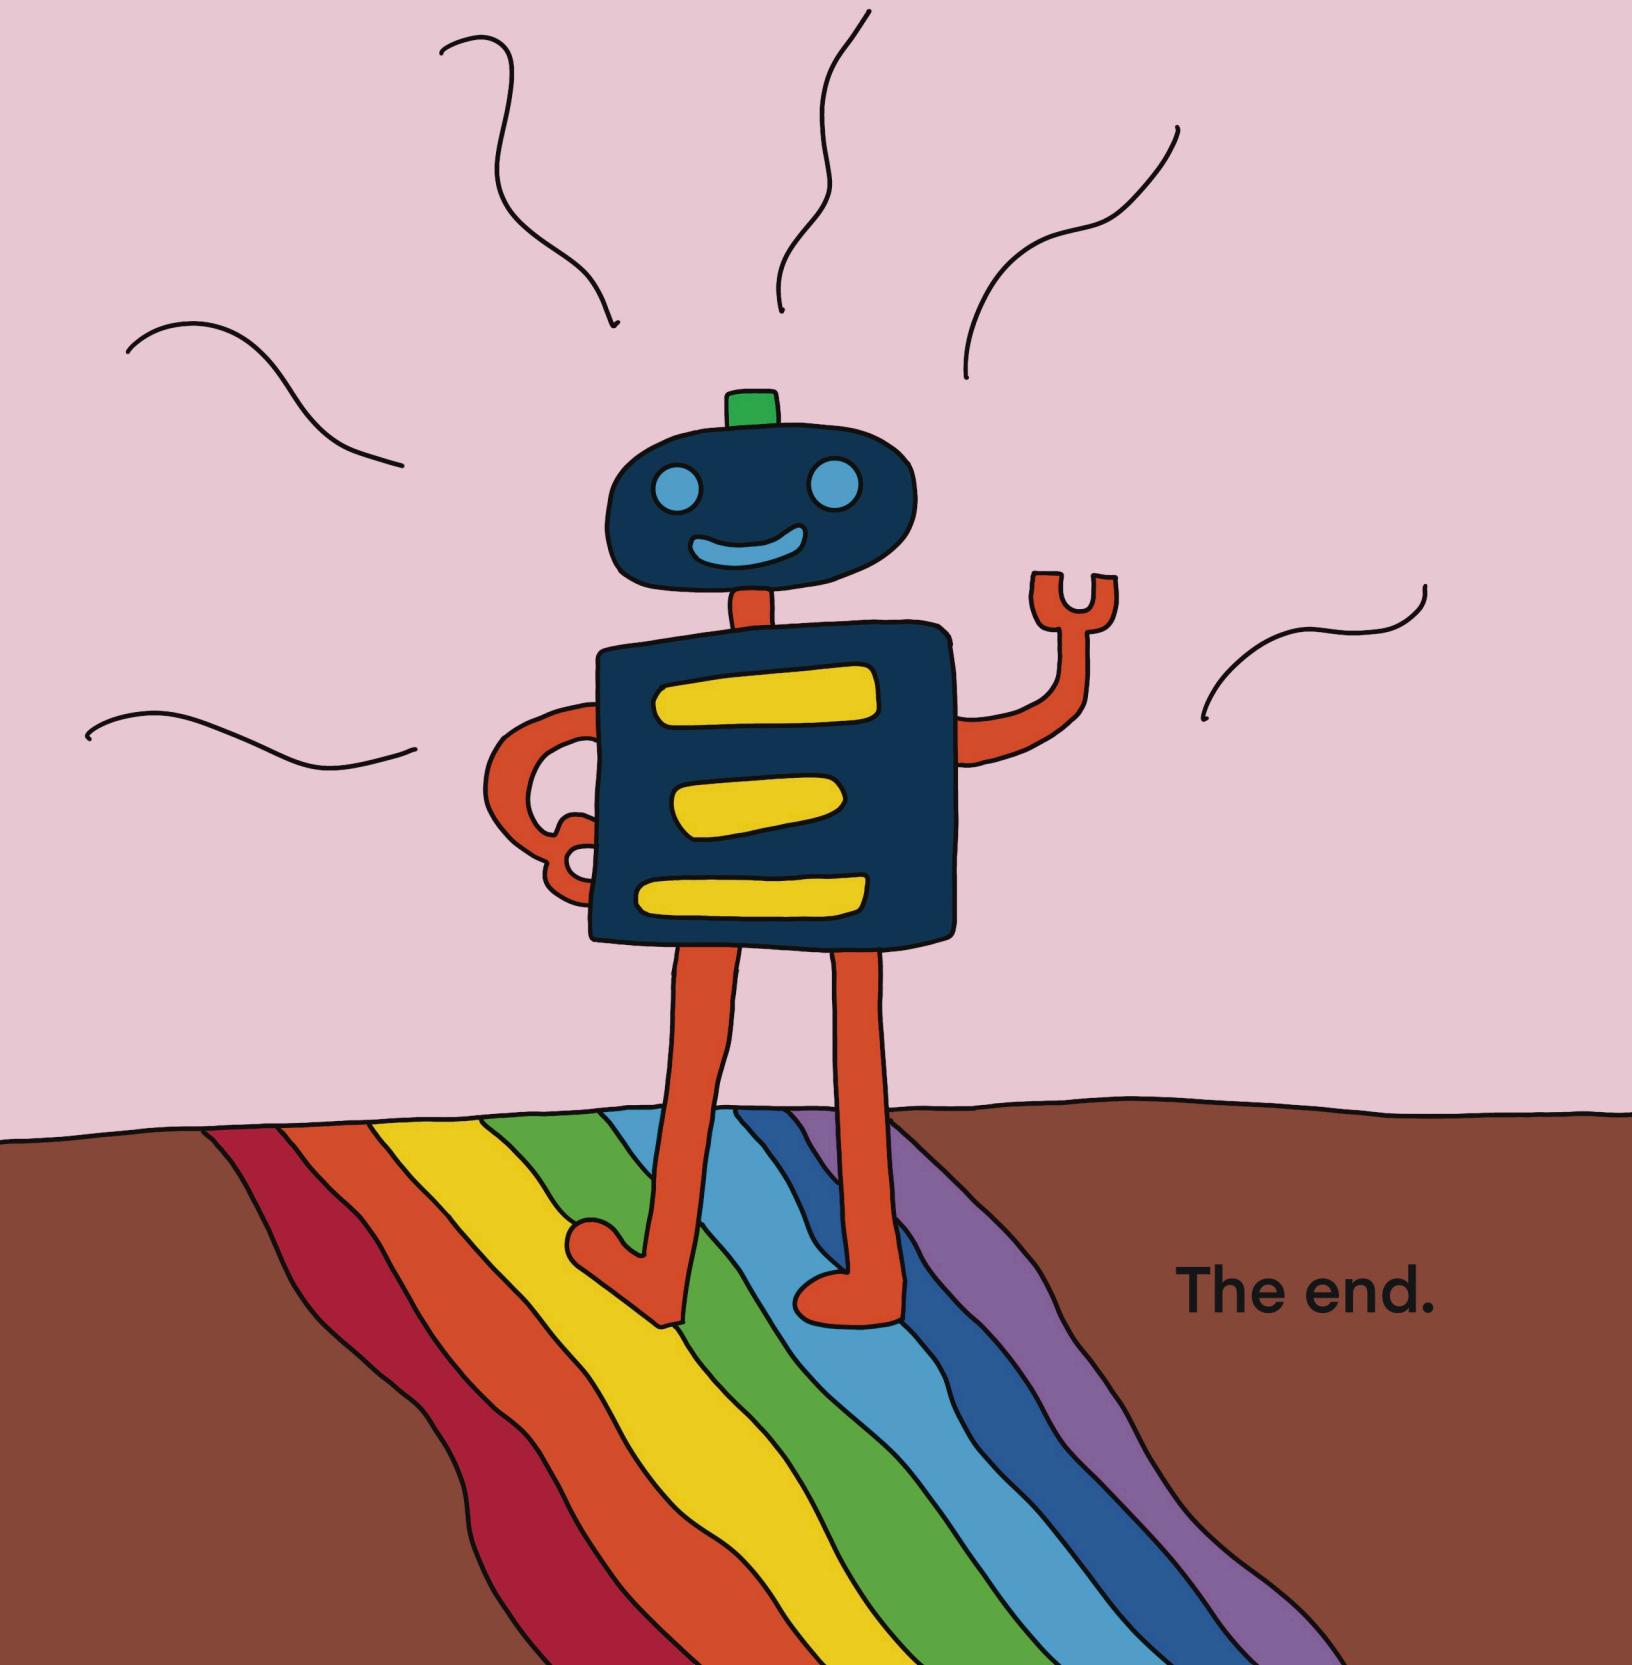

5- Do the not-so-good parts beat the good parts?

...then maybe I could have *anticipated* the consequences of my invention!

Doctor Smart researches to answer the questions. She learns a lot from other researchers and her own students!

With the help of her students, Doctor Smart creates Learn-learn 2000, and it is loved by the students, in contrast to the prior version!

The end.
